PROJECTS

Rebirth

Software Engineer

June 2025 - August 2025

Webpage: <https://jaydevhq.com/projectRebirth>

GitHub Repository: <https://github.com/The-Jay-Dev/Rebirth>

- Developed a timing-based rhythm game using C++, QML, and Miniaudio
- Implemented precise audio-visual synchronization and beat timing logic
- Designed gameplay systems inspired by falling-note rhythm mechanics
- Integrated multi-threaded functionality to improve performance across low-high end systems

Portfolio Website

Software Engineer

August 2025 - Present

Webpage: <https://jaydevhq.com>

GitHub Repository: <https://github.com/The-Jay-Dev/Portfolio-Website>

- Built a responsive personal portfolio using React, Tailwind, and CSS
- Designed a clean, modern UI to showcase projects and technical skills
- Implemented reusable components and mobile-first layouts for cross-device compatibility

2D Jump Trajectory Line

Software Engineer

December 2024 - February 2025

GitHub Repository: <https://github.com/The-Jay-Dev/2D-Trajectory-Line-GodotV4.3>

- Developed a 2D jump prediction system using Godot 4's physics engine
- Calculated and visualized player jump trajectories in real time
- Integrated physics-based motion to accurately reflect in-game movement behavior
